

INASIGHT

Artificial Intelligence delivering the most advanced predictive analytics to extract maximum value from your data and differentiate your business

- Predict customer behaviour
- Identify anomalous business activity
- Assess potential risk
- Proactive asset maintenance

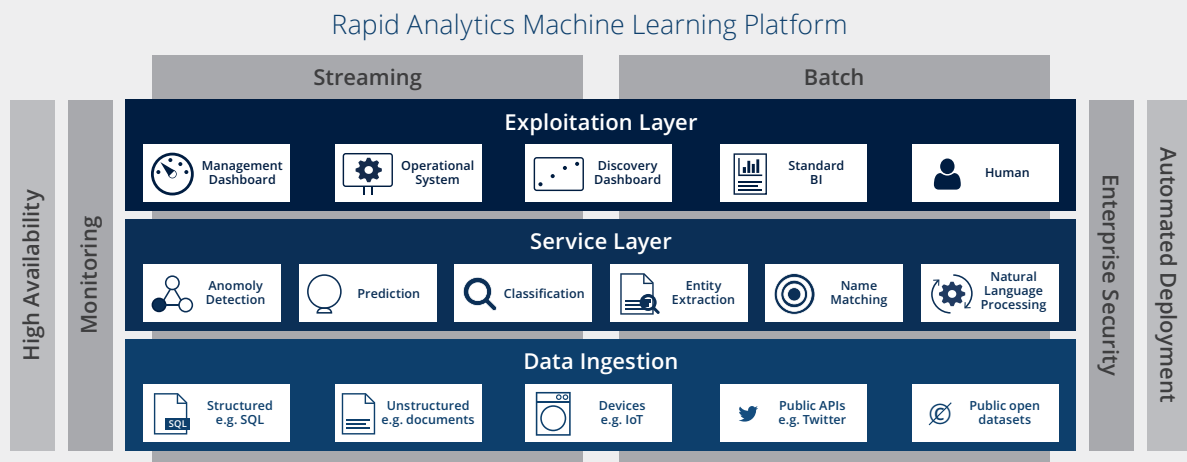

In a fast-paced environment, fuelled by a phenomenal array of data – both structured and unstructured – combined with ever advancing technology and data science techniques, predicting the future is now a real possibility.

Differentiating through data discovery, Inasight uses the latest AI techniques to deliver business advantage.

Our Rapid Analytics Machine Learning Platform (RAMP) is built on the latest leading technology services allowing us to discover tangible business insights within weeks, placing organisations in a truly market-differentiated position.

Organisations gain advantage by optimising the latent value in data assets to increase sales, margins and maximise operational efficiency. Now, they can also detect potential fraud, security concerns and other business risk exposure, as well as proactive maintenance of any physical assets.

Inasight – predicting the future.

Inasight was founded in 2016 with a simple goal: to give our customers the ability to exploit every aspect of their data using Artificial Intelligence.

Led by co-founders Neil Miles, CEO and Robin Meehan, CTO, Inasight is a company of experts dedicated to transforming the way businesses think and operate.
